POLY VALUE KITS

Skyjacker comes through with some great value priced lift kits tailor-made for an array of vehicles. These durable, long-lasting Polyurethane Value Kits include Polyurethane Spacers for the front struts (or coil springs) plus all the parts & hardware necessary to get you up & rollin' in style. They install without any cutting or welding. It's all bolt-on using standard tools for the do-it-yourselfer.

These Poly Value Kits are an inexpensive way to add 2-2.5 inches of lift. Top these value kits off with Skyjacker's HYDRO H7000, NITRO N8000 or PLATINUM M9000 Series shocks and you're ready for the open road or the wide open off-road.

pg.188

ASSORTED POLYURETHANE

Polyurethane Skyjacker® cares a very large line of Polyurethane products to fit your vehicle's needs. The list includes bump stops, bushings, cab mount kits, Clearance Kits, and an array of bushings (spring eye, frame shackle, radius arm, track bar, caster) for various applications, makes and models. Polyurethane is a superior material that has a higher load-bearing capacity and can better resist the dynamic torque-like twisting and turning forces of suspension components as they go through their normal operation\travel movements. It is also an improved sound\vibration dampening material.

STAINLESS STEEL BRAIDED BRAKELINES

pg.167

D.O.T. Certified Stainless Steel Braided Brake Lines Skyjacker® has gone to 'extended lengths' to accommodate our four wheeling friends and to improve your 4x4s braking performance. All have been tried and tested in some of the most severe conditions four wheeling has to offer in virtually every corner of the world. They all passed the test and are proven in their quality of engineering, workmanship and finish. Skyjacker® brake lines conform to all federal requirements of FMVSS106, making them D.O.T. Certified and T.U.V. Approved in Germany.

pg.163

STEERING STABILIZERS

Skyjacker® Steering Stabilizer A steering stabilizer is a dampening shock for your steering system. It dampens out the harshness of the highway, the "shimmy" from running the additional weight of larger tires & wheels and places control back into the driver's hands. Stabilizers also reduce the fatigue of the driver on a personal level by reducing the amount of physical strength it takes to guide those larger tires on and off the road. Changing the weak stock unit for a better performing replacement or adding dual steering stabilizers is an inexpensive but worthy investment.

CONTROL ARMS \ LINKS

Standard Link (Flex Series & Value Flex Series) Control arms are fitted with greaseable polyurethane bushings on both ends of each link end. **Single Flex** (Flex Series) Control arms fitted with a spherical rod end on one end and greaseable polyurethane bushing on the other. **Double Flex** (Flex Series) Control arms that are fitted with a spherical rod end on both ends of each link end. **Single Flex Long Arm** (Value Flex Series) Available in the 6" Value Flex Series, these control arms that are 80% Longer than stock and are fitted with a spherical rod end on one end and greaseable polyurethane bushing on the other. **Double Flex Long Arm** (Rock Ready® Series) Available in the 4", 6", 8" and 10" Rock Ready® Series, these control arms that are 80% Longer than stock and are fitted with a spherical rod end on both ends of each link end.

POLYURETHANE CLEARANCE KITS / BODY LIFTS

Skyjacker® has 2" and 3" Body Lifts available for the following Jeep Applications. Installing a Body Lift is the perfect time to replace those worn Cab Mount Bushings with new, longer lasting Polyurethane Units (See Pages 192-193).

There is also a '1" Clearance Kit' available. This Kit Completely Replaces the factory rubber body mounts with a more durable, long-lasting Polyurethane material. 1" of Clearance Lift is attained by using 1" Taller Mounts.

Replacement Shocks are also recommended, but not required. (See Shock Application Guide - Page 155).
